Essential oils, like all organic compounds, are made up of hydrocarbon molecules and can further be classified as terpenes, alcohols, esters, aldehydes, ketones and phenols etc. To help you in the understanding of the chemical constituents of the oils, it may be a good idea just to have a look at what an isoprene unit is.

### The chemistry of essential oils - the lowdown and upside ...

Chemistry of Essential Oils Essential oils are produced by various differentiated structures, especially the number and characteristics of which are highly variable. Essential oils are localized in the cytoplasm of certain plant cell secretions, which lies in one or more organs of the plant; namely, the secretory hairs or trichomes, epidermal cells, internal secretory cells, and the secretory pockets.

### Essential Oils' Chemical Characterization and ...

Essential oils are multi-dimensional, filled with homeostatic intelligence to restore the body to a state of healthy balance. When body conditions change, oils adapt, raising or lowering blood pressure as needed, stimulating or repressing enzyme activity as needed, energizing or relaxing as needed. Oils are smart.

### by Dr. David Stewart, Ph.D. - The Whole Dog

Since your review I have looked at it with a much more critical eye, but do credit him when not erroneous in his information, for both trying to make the chemistry of essential oils easy to understand, and imparting a sense of the sacredness of working with essential oils, a gift from God and nature.

### Book review: The Chemistry of Essential Oils Made Simple

Essential oils are mixtures of volatile compounds, usually non-polar and fat soluble, which are produced in plant species. Each plant essential oil is composed of a combination of many chemical constituents, sometimes even over 100 different compounds in a single essential oil. Essential oils are extracted from plants through steam or water distillation, solvent extraction, or expression.
